Summary

Aspiring Full Stack Developer with hands-on experience building web applications using React.js, JavaScript, HTML, CSS, Tailwind CSS, and Bootstrap. Skilled in backend development using both Node.js with Express.js and Django with Python, including REST API development and authentication systems. Experienced working with databases such as MongoDB and Supabase. Familiar with Java and Data Structures and Algorithms, and proficient with Git, GitHub, Postman, and Linux (Ubuntu). Passionate about developing scalable, secure, and user-focused web applications.

Education

G.H. Rasoni College of Engineering and Management
B.Tech in Electronics and Telecommunication Engineering

Nagpur, Maharashtra, India
2023 – 2027 (Present)

Skills

Programming Languages: Java, JavaScript, Python

Frameworks and Libraries: ReactJS, Node.js, Express.js, Django

Web Technologies: HTML5, CSS3, Tailwind CSS, Bootstrap

Databases: MongoDB, Supabase

Tools and Platforms: Git, GitHub, Linux (Ubuntu), Postman, REST APIs

Core Concepts: Data Structures and Algorithms

Project Work

• Voxly – Real-Time Communication Platform

Developed a real-time web application supporting one-to-one video calls and instant messaging. Implemented REST APIs using Django to handle user authentication, session management, and message exchange. Integrated WebRTC-based communication with a ReactJS frontend to provide seamless real-time interaction. Focused on secure authentication, efficient state handling, and responsive UI design.

• Certify Hub – Certificate Management System

Designed and developed a centralized platform for storing and managing academic and professional certificates. Built backend logic using Django to handle certificate uploads, structured data storage, and retrieval operations. Created a responsive frontend interface to allow users to view, organize, and manage certificates efficiently. Ensured clean data organization and improved accessibility across devices.

• Forex Tracker – Real-Time Currency Tracking App

Developed a real-time forex tracking application using the MERN stack (MongoDB, Express.js, React.js, Node.js). Implemented live currency price updates and data streaming for multiple currency pairs. Built RESTful APIs using Node.js and Express.js to handle currency data and backend logic. Designed an interactive React.js frontend to display currency trends and real-time updates.

• Campus Event – Event Discovery Platform

Built a campus event discovery and management platform using React.js, Node.js, Express.js, and REST APIs. Implemented user authentication, event creation, event search by interests, and user registration features. Connected the React frontend with a Node.js and Express.js backend to securely manage event data and user interactions. Focused on usability, role-based access, and scalable backend architecture.

Achievements

• Campus Innovate Hackathon

Participated in a team-based hackathon and developed a Campus Event Discovery website using Django and React, gaining experience in collaborative development and rapid problem-solving.

• Supabase Event Showcase

Presented a To-Do List application built with Supabase for backend services, demonstrating authentication and database integration.

• Flutter Event Participation

Attended a Flutter developer event, gaining exposure to cross-platform development concepts and industry practices.

Certifications

• Postman API Fundamentals Student Expert

Demonstrated proficiency in testing, consuming, and debugging REST APIs using Postman.
